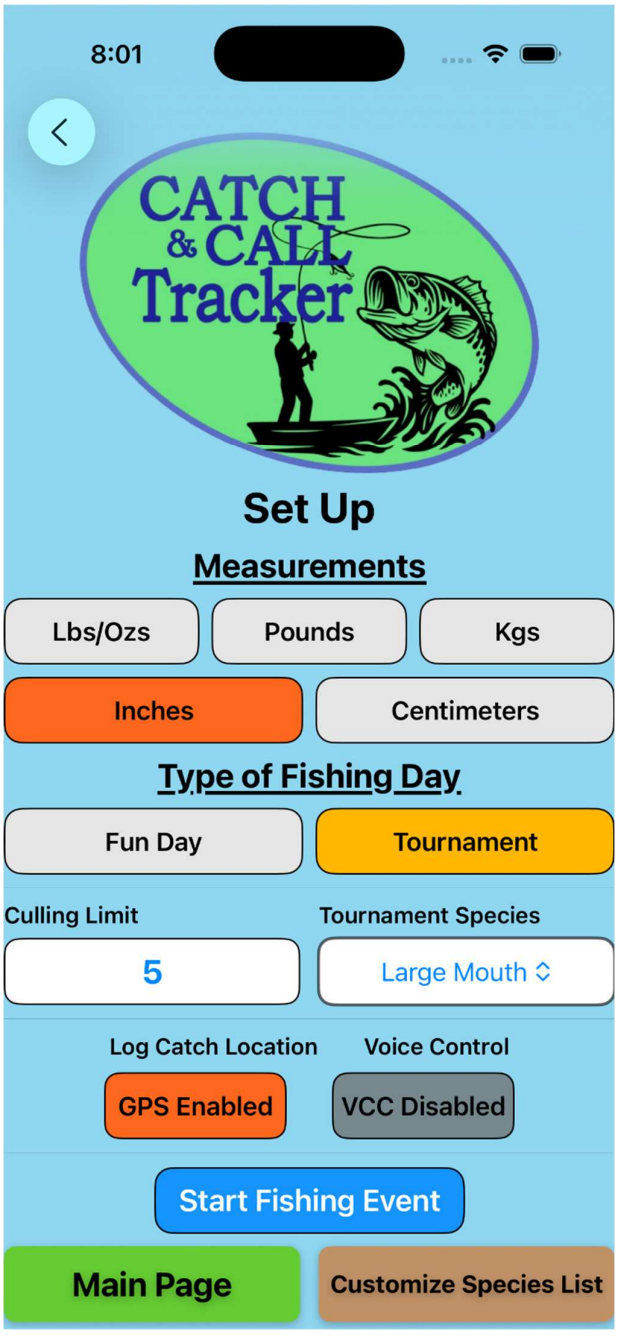
Catch and Call Tracker
Tournament Mode (Length Entry)

Purpse

Tournament Mode is for tracking your best catches during competitive events. You can sort fish by weight and only the top 4, 5, or 6 fish count toward your final total. Each fish can be tagged with a unique clip color for visual tracking.

Note:
Weight and Length measurement Tournament modes are very similar, only the measurement units are different



Getting Started

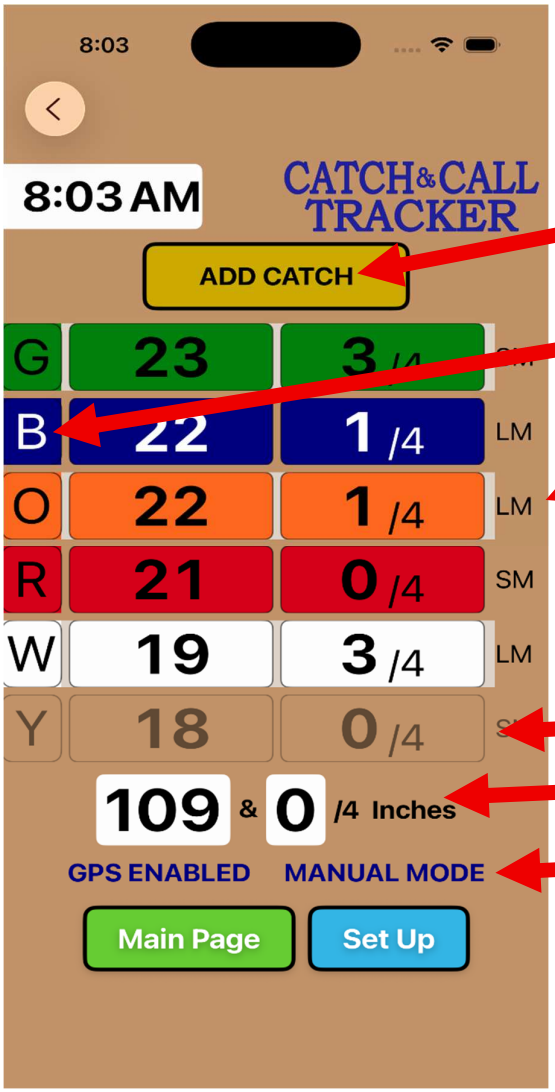
From the Set Up menu,

- Select ‘Measurement Type’
- select 'Tournament Mode'.
  - Culling Limit and Tournament Species will appear

Configure Tournament:

- Tournament species
  - (e.g., Walleye, Tarpon, etc.)
- Catch limit
  - (4 or 5 fish Limit)
- Enable GPS to log location
- Voice Command Control
  - (if available)

Entering a Catch



Select the Add a Catch Button

The “B” is for Blue Culling Clip
(Help for the color blind angler)

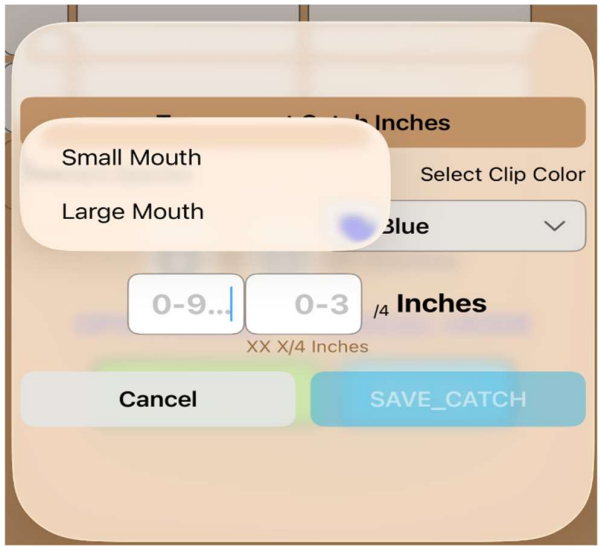
The “LM” is what species for your records
For Bass there is LM, SM and SB
Largemouth Smallmouth, and Spotted Bass

Catch Returned / Culled

Total

GPS is ON and Manual Mode / VCC

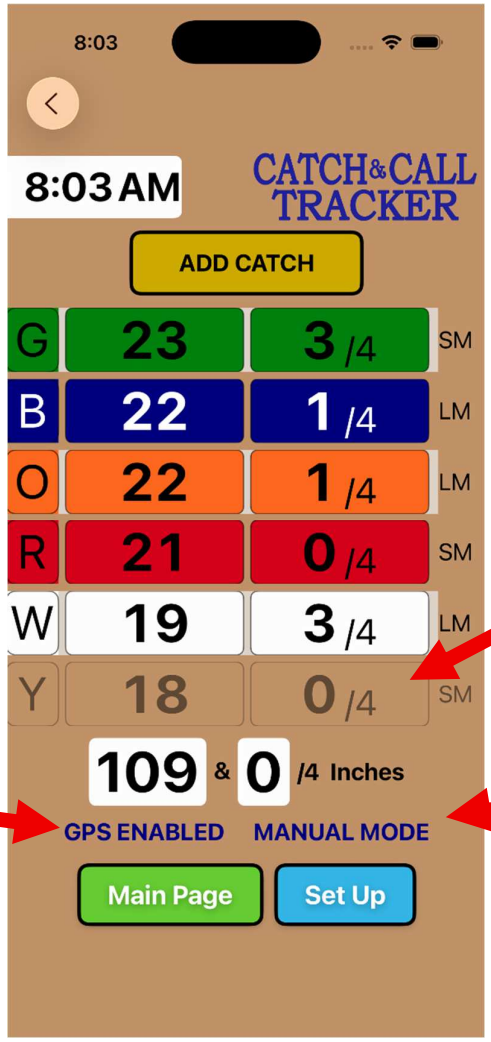
Adding A Catch



1. Tap 'Add Catch' to open the popup.
2. Enter weight using the major and minor value
   - Inches and Quarter in this case
   - (or the other units as configured).
3. Species will be set unless it is Bass *see Note1*
4. Either use the pre-set next clip color or select from an available clip color
5. (e.g., Red, Blue, Green, etc.).
6. Tap ‘Save Catch’ to add your fish to the list.

What Happens Next

- Only the top N (4 or 5) heaviest fish count in tournaments
- Each fish appears on the culling board with its weight and assigned color.
- The board updates automatically as heavier catches replace lighter ones.
- The smallest catch on the list blinks showing the next target size to surpass
- The last fish culled is greyed to show the clip color, size, and species
- The total is continually recalculated



The dimmed catch shows the color of clip that was culled as well as the weight and the species

GPS is “ON”
Catches are logged with GPS

Manual Mode
Go to Set Up page to Enable VCC for Voice Command Control

GPS Location (Optional)

If GPS is enabled in the Setup page, location is recorded when you save each fish. This allows for catch location tracking without draining the cellphone battery. Note, to use the mapping and sharing features the catch must have the coordinates recorded by enabling the GPS.

VCC Voice Command Control (Optional)

The VCC Voice Command Control is available with the full version of the Catch and Call Tracker app which is called the Pro V Tracker.
If VCC is enabled on the Setup page the user will see the VCC Enabled on the Tournament page. The user can then add, delete, or edit the catches with a simple press of the power button of the Bluetooth device. The User can also query verbally the VCC to find out which catch is the smallest in the list, which catch is the largest on the list, what the total weight or length is? The user can also ask a number of other questions as well. The VCC is a true hands free feature that allows the angler to stay focused on catching the next lunker. See the Catch and Call Pro V Tracker How To for more information on this fantastic tracking feature.

Note1: For Bass Tournaments the Angler can target Largemouth and/ or Smallmouth bass
In the Southern USA there are Spotted bass as well. The List will have Largemouth, Smallmouth, and Spotted bass when Spotted bass is selected on the Set Up page Tournament Species
