

Catch and Call - How to Guides

How To: Reorder Selected Species

This guide explains how to rearrange your selected species in the order you prefer (e.g., most used first).

The species list allows you to log which species you caught. With the ability to add your own species to the list you are not restricted to what fish you target.

1. Open the Reorder Species screen from the Species List page.
2. You will see the 8 species you selected.
3. Tap and hold the drag handle (≡) beside a species. You will see the selected species row color change.
4. Drag it up or down to change the order.
5. Tap Save when finished.
6. If you want to restore the "Main Species List" just select the "Reset Species List" button. Note the added species will still be on the master species list for later use.
