

# **Bass Angler Tracker - Length Entry (Tournament Mode)**

## **1. Setting Up Tournament Mode**

From the main menu, tap 'Tournament Mode'. On the setup screen, choose the following options:

- Measurement Type: Length (inches and 1/8ths)
- Number of Fish to Keep: 4, 5, or 6
- Target Species: (e.g., Pike, Walleye, Small Mouth, etc.)
- Enable or Disable: GPS Logging and Culling

## **2. Length Entry Screen**

After setup, tap 'Add Catch' to enter fish data. You'll see the following options:

- Species of Fish (dropdown)
- Whole Inches (e.g., 17 inches)
- 1/8th Inch Increments (e.g., +2/8)
- Clip Color (assign a visual marker for each fish)

Make your selections and tap 'Save' to log the fish.

## **3. Culling Board & Rankings**

Only the top N (4, 5, or 6) longest fish will count toward your tournament total.

- The app will automatically sort entries from longest to shortest.
- Shorter fish will be culled when a longer one is added.
- Clip colors help identify and manage individual fish visually.
- The total combined length is updated live as catches are added or replaced.

## **4. GPS Location (Optional)**

If GPS is enabled in the setup screen, the app will record the exact location when each fish is saved.

This allows for catch location tracking without constantly running the GPS.

## **Bass Angler Tracker - Length Entry (Tournament Mode)**

### **5. Pro Tips**

- Use precise measurements - 1/8th inch can make a big difference!
- Long-press a catch to delete it.
- Clip colors are reused when a shorter fish is removed from the top rankings.
- If fishing for Bass, the app supports both Large Mouth and Small Mouth entries in the same tournament.
