

## Using Voice Control in Catch and Call

What it does:

Catch and Call supports hands-free voice logging of your fish catches using a Bluetooth headset or your phone's microphone.

How to Use It:

1. Enable Voice Mode on the SetUp page.
2. Tap your Bluetooth button (or headset mic) to activate.
3. Say your command:

"Two pounds four ounces, smallmouth, red clip, over."

Battery Optimization Tips:

To keep voice control working when your phone sleeps:

- Open Battery Settings
- Search for Catch and Call
- Tap it, and select: "Don't optimize"

Without this, Android may pause the microphone while the screen is off.

Recommended:

- Use a Bluetooth mic (headset or lapel)
- Keep your phone screen off to preserve battery
- Use short, clear voice commands
