

Catch and Call - Voice Assistant Setup Guide

Why This Matters

To ensure smooth voice control operation, your phone must be configured correctly. This prevents conflicts with manufacturer voice assistants (like Bixby) and ensures the Catch and Call app has access to the correct voice recognition and assistant services.

Steps to Set Up Your Phone

1. Open the Voice Assistant Setup page in the app.
2. Disable any manufacturer assistant (e.g., Bixby) using the 'Bixby Settings' button if it's available.
3. Tap 'Voice Input Settings' and set your preferred input engine to 'Google'.
4. Tap 'Assistant Settings' and confirm your digital assistant is set to 'Google Assistant'.
5. Confirm your default recognizer and assistant in the text boxes shown.
6. Ensure your Bluetooth headset or button trigger is paired and working.
7. Return to the main app and enable Voice Control from the Setup page.

Optional Tips

- Reboot your device after making changes to ensure settings apply.
- Test by pressing your Bluetooth button; the app should start listening.
- If voice fails, recheck input settings and permissions.

Where to Find This

You can revisit the Voice Assistant Setup screen anytime from the Training Menu. It's also shown automatically the first time you open the app.
