

Bass Angler Tracker: Voice Control Guide

What is Voice Command Control?

Voice Command Control (VCC) in Bass Angler Tracker allows you to operate the app hands-free using spoken commands. You can log catches, query tournament stats, and navigate through the app without touching your device - perfect for hands-on fishing. VCC uses Android's speech recognition to parse your voice inputs (e.g., "3 pounds 4 ounces largemouth blue clip") and guide you through confirmation prompts.

Enabling Voice Control

1. Open the Bass Angler Tracker app on your Android device.
2. Tap the menu button, then select 'Settings'.
3. Scroll to 'Voice Control Mode' and toggle it ON.
4. Grant the app permission to record audio when prompted.
5. If asked, allow the app to run in the foreground and send notifications.
6. Once enabled, you can initiate VCC by tapping the microphone icon or using your Bluetooth media button.

Tips & Troubleshooting

- Speak clearly and close to the microphone for best recognition.
- Use the word 'over' at the end of each command to signal completion.
- If a command fails, simply repeat when prompted, up to three times.
- Say 'cancel that' at any prompt to exit voice mode.
- Ensure your device's microphone is not blocked by a case or cover.
