Organize the Species List

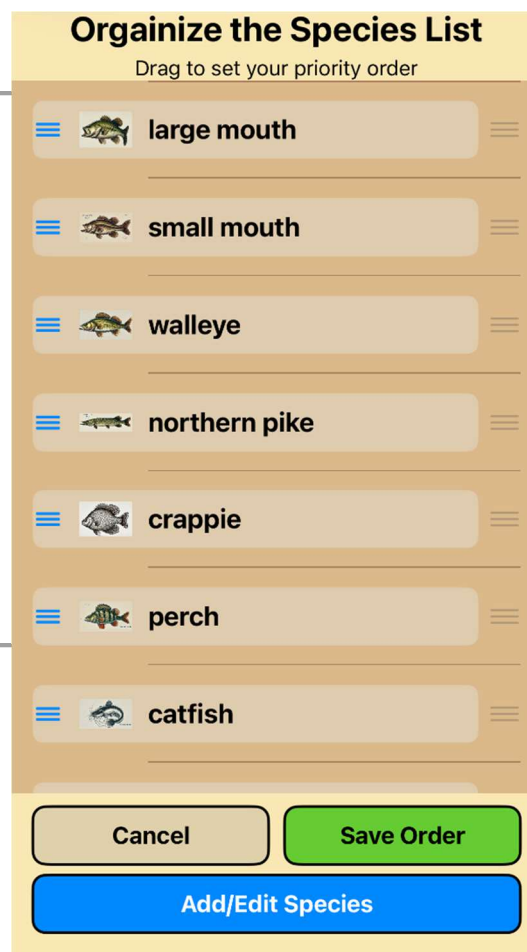

Reorder Main Species List

This guide explains how to rearrange your selected species in the order you prefer (e.g., most used first).

Please note that the Apple and Android versions look very similar and are closely mirrored. Both versions act the same, the layout and icons used may be slightly different.

The species list allows you to log which species you caught. With the ability to add your own species to the list you are not restricted to what fish you target.

1. Open the Reorder Species screen from the Species List page.
2. You will see all the species plus the ones you have added which are added to the bottom of the list.
3. Tap and hold the drag handle (≡) beside a species. You will see the selected species row color change.
4. Drag the species row up or down to change the order.
5. Tap Save Order when finished.
6. All Species that you have added can Edit the entry simply by selecting the red delete icon to remove the entry and then re-enter the species with the proper name and image.

Add Edit Species to the Master List

1. Click the Add/Edit Species button on the Species Reorder page.

- a. Click the Add Species To List
- b. The Add Species popup will open where you Enter the Species Name
 - i. If the species already exists there will be a warning
- c. Because it is a new species you will be able to select an image from your Photo folder
- d. The new Species will be added to the bottom of the list. To move the new speices up simple return to the Order Species page and re order the list as you deem fit.

Add Custom Species

Select Image

Add

Not all species are on the list so this is where you can add that missing species to the list. 🐟
If you need to change the entry just select the Delete Icon and then re-add the species and the image.
