

# Catch and Call Tracker Mapping GPS Locations

---

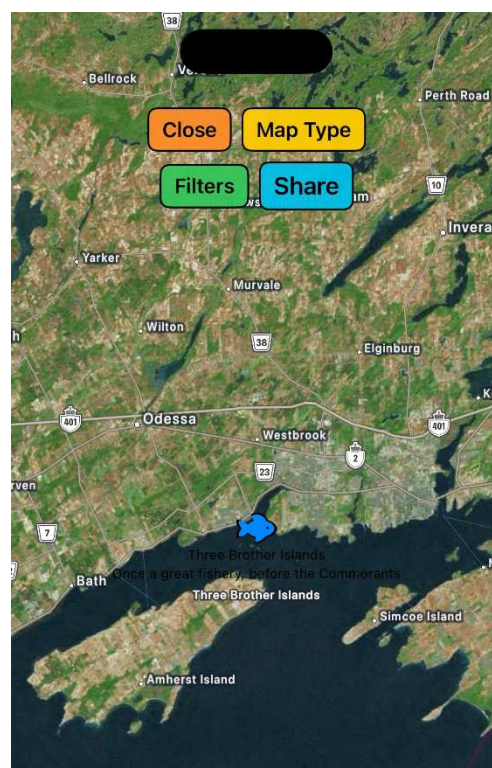

## Overview

The app can display your catch locations on a map. This lets you visualize where you caught each fish, useful for reviewing patterns or planning future trips. You can apply filters to only show specific dates, species, or sizes.

---

## 1. Opening the Map View

- From the **Main Menu**, tap "**Look Up / Share Data**".
- This will open the GPS satellite map with icons showing catch locations.
- To Set which catches you wish to see select the "Filters" button.

---

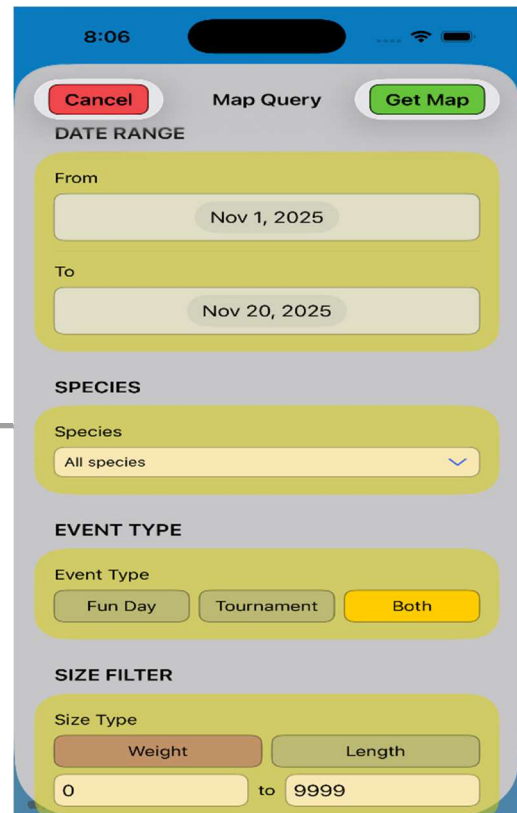

## 2. Filtering Map Catch Information

- Tap any map marker to view details:
  - Date & time of catch
  - Species
  - Weight and/or length
  - Catch type (Fun Day or Tournament)

---

### 3. Using Map Filters

- Tap the **"Map Settings"** or **"Filters"** button to open the query panel.
- You can filter by:
  - **Date Range**
  - **Species** (multi-select)
  - **Weight Range**
  - **Length Range**
  - **Catch Type** (Fun Day, Tournament, or both)

The screenshot shows a mobile application interface for a 'Map Query'. At the top, there is a status bar with the time '8:06' and battery level. Below the status bar, there are three buttons: 'Cancel' (red), 'Map Query' (blue), and 'Get Map' (green). The main content area is divided into several sections, each with a title and a form field or set of buttons. The sections are: 'DATE RANGE' with 'From' and 'To' date pickers (showing 'Nov 1, 2025' and 'Nov 20, 2025' respectively); 'SPECIES' with a 'Species' dropdown menu (showing 'All species'); 'EVENT TYPE' with three buttons: 'Fun Day', 'Tournament', and 'Both'; and 'SIZE FILTER' with a 'Size Type' dropdown (showing 'Weight' and 'Length') and two input fields for '0' and '9999' separated by a 'to' label.

---

### 4. Satellite View and Navigation

- The map uses **Google Maps Satellite View** by default.
  - Pinch to zoom and drag to explore your saved catch locations.
  - Only catches with valid GPS coordinates will appear.
-

## Additional Notes:

- Map data is local — no catches are uploaded.
- You can use the map to revisit productive spots.
- Filtering allows you to focus on specific trips, species, or size categories.
- Select the Map Type to change which map you see.

---

## 5. Save / Share

Share your catch data or evaluate your records on your computer with the Catch and Call Map Analyzer.

See the How-To Section of the Catch and Call app to locate the extra mapping features.

- Save as CSV (comma Separated Values).
  - Great for Setting up a table on spreadsheet
- Save a KML (keyhole markup language)
  - Send the file to your computer
  - Open the file up with Google Earth
  - See all the catches and evaluate patterns.
