Catch and Call Tracker
# Save CSV or KML Files

---

Overview

The app can create CSV (comma separated variable) or KML (keyhole markup language) of the selected catch information. These files can be sent to other devices or shared with others.

Selecting the Information

- Select the information to have on the file

Viewing the File

- Click on the View CSV File
- You will see a listing of the data in the file

Sharing the Information

- Select the Share file to open a list of available outlets on the cellphone

Where is the Information Stored

- The CSV file is saved in your phone's local storage using secure File Provider access.
- The file is temporary and may be overwritten if exported again with the same name.

Using the KML file

- Send the KML file to a computer that has Google Earth
- Open the file on Google Earth and all the Catches will be shown on the map

Additional Notes:

- CSV files can be opened in Excel, Google Sheets, or any text editor.
- You can export your full log or filtered results depending on the screen used.
- Make sure file sharing apps have permission to access files if prompted.
